Bore well /Open well Recharge

This institution does not buy water from outside. Instead, the water which has been saved in the pond provides sufficient supply of water to the institution. There are 4 bore wells which help to get approximately 4000 to 8000 liters every day. In order to recharge the bore wells, there are around 40 pits which are constructed in different dimensions are filled with coarse gravel for adequate infiltration of water. This helps in increasing the ground water level.

One of the open bore well recharge pits near Bio Tech Block
